

## SECTION 36

### OPEN SPACE (OS) ZONE

#### 36.1 GENERAL PURPOSE OF THE OS ZONE

The Open Space (OS) Zone is a two-tier zone. The OS1, OS2 and OS3 Zone variations are intended to be applied to areas located outside of conservation lands (hazard lands, floodplain and steep slopes) and areas which are not environmentally significant. The OS1 Zone variation is typically applied to City and private parks with no or few structures. The OS2 Zone variation is applied to City and private parks with structures and includes a broader range of larger uses which can generate more traffic and activity. It is the only variation which permits structures. All the other zone variations permit very limited or no structures. The OS3 Zone variation is applied to cemeteries which have no alternative uses.

The OS4 and OS5 Zone variations are the most restrictive open space zone variations and are applied to lands which have physical and/or environmental constraints to development. A very limited range of structures is permitted subject to site specific studies. The OS4 Zone variation is intended to be applied to hazard lands; specifically the floodway, steep slopes and lands that may be subject to erosion as well as landfills and contaminated sites. Development within the OS4 Zone is regulated pursuant to the *Conservation Authorities Act*. The variation is intended to provide for development of low impact recreational facilities that do not normally include structures or buildings, and require locations within or adjacent to the floodplain. Buildings may require floodproofing, dry and safe access, etc. if located in flood fringe areas, subject to the *Conservation Authorities Act*.

The OS5 Zone variation applies to important natural features and functions that have been recognized by Council as being of City-wide, regional, or provincial significance and identified as components of the Natural Heritage System of the Official Plan. In order to protect the identified features and functions, permitted activity is limited to a range of low-impact uses associated with passive recreation, conservation and ecosystem management. Development and site alteration is permitted only if it has been demonstrated through an appropriate study that there will be no negative impacts on the features and functions for which the area has been identified.
