Aanii,

I hope you have been doing well. I wanted to provide you with a status update for the City of London Pollution Prevention Control Plan (PPCP) Update Study, which was initiated on August 24, 2023. Please see attached the Project Status Update letter, which is also being delivered by registered mail. Attached is also a copy of the Notice of Commencement and Project Information Sheet which were previously sent at the start of the project.

The City of London recognizes the importance of the engagement and consultation process and values the input and feedback from your community, Bkejwanong Territory (Walpole Island) First Nation. We invite you to provide your community's comments and perspectives on the study update. Should you have any questions, or would like to meet in person to discuss this study update, please don't hesitate to contact the City's Project Manager, Yanzhen Ou (oyanzhen@london.ca).

Miigwech,

STATUS UPDATE

THE CITY OF LONDON

POLLUTION PREVENTION CONTROL PLAN (PPCP) UPDATE STUDY

March 13, 2025

Chief Leela Thomas
Bkejwanong Territory (Walpole Island)
R.R. #3 117 Tahgahoning Road
Walpole Island, ON N8A 4K9

Aanii Chief Thomas,

I hope you have been doing well. This letter is to provide you with a project status update for the City of London Pollution Prevention Control Plan (PPCP) Update Study, in advance of the Public Information Centre (PIC) planned for April 2025. We'd like the opportunity to discuss the proposed strategy with you and incorporate any feedback you may have at your earliest convenience.

Please note that the Study was officially initiated on August 24, 2023 (please see attached the **Notice of Commencement** and **Project Information Sheet**). Since the last project status update on March 15, 2024, the Project Team completed a comprehensive background review and inventory of the Study Area systems. Additionally, updates to the wastewater hydraulic model have been finalized and used to assess the frequency and volume of combined sewer overflows (CSOs) and sanitary sewer overflows (SSOs) for the 2018 typical year rainfall. We have also ranked the existing sewer overflow and pumping station bypass locations within the City, and high-priority sites were identified as those with greater discharge volume, do not meet the 90% capture of wet weather flow volume, and have an existing impaired status for the receiving watercourse(s).

In accordance with Phase 2 of the Municipal Class EA process for Master Plans, various pollution reduction alternatives were evaluated to satisfy the requirements of MECP Procedure F-5-5, without also negatively impacting existing system performance (i.e. sanitary sewer service and basement flooding protection). Alongside traditional mitigation strategies focusing on capital infrastructure improvements (sewer upsizing, provision of storage, further combined sewer separation, etc.), the City has identified a long-term source control strategy. If implemented, it would facilitate the total disconnection of properties with weeping tiles currently connected to the City's sewer system and ultimately reduce CSOs and SSOs to the Thames River and other receiving streams.

The City of London recognizes the importance of the engagement and consultation process and values the input and feedback from your community, Bkejwanong Territory. We invite you to provide your community's comments and perspectives on the study update. The date of the PIC has not yet been confirmed, but the **Notice of PIC** with details on how to attend the in-person event will be posted to the Project Website in the coming weeks, and can be accessed using the link below.
